

AUGMENTED INTELLIGENCE FOR COMPLIANCE AND EQUIPMENT

Every rig. One glance.

One offline system for the whole drilling rig: permits, safety cards, certificates, inspections, maintenance, stores, procurement and budget. It runs on the rig with no signal, reads every record as it is written, and gives the operator a live, read-only view of every contractor rig. Built offshore, by an Offshore Installation Manager, and sold under the contractor's own name.

31

screens for the rig, 17 read-only for the operator

5

sealed permit types with signing order enforced

90-30-14

day reminder ladder, then daily, on every register

0

internet required. Nothing phones home.

What changes on the rig

Permits that cannot be skipped

Hot work, cold work, isolation, confined space and bypass. Gas tests locked to the tester; closed permits sealed with a key held on the rig host.

No question about status

Certificates, inspections, tickets, maintenance and critical spares on one clock. The Critical list shows everything overdue or due inside seven days.

Stores that count themselves

PDA scanner, label printer and a single ledger. On-hand and runway come from movements; below minimum shows up the same morning.

AI that shows its working

Reads cards, stock, maintenance and documents on the rig. Flags the near miss filed as housekeeping, the part running out, the failure that keeps coming back. People decide.

The operator's window

Safety, compliance, permits and the Fleet Scorecard across every rig running AiCE, under the operator's own sign-in. Read-only by construction.

Month-end is a button

Executive, HSE, CoC compliance, maintenance and inspection-forecast reports computed from the record, the same format every month, every rig.

The screens

Dashboard Critical Fleet Scorecard CoC Register Inspections
Third-party inspections Equipment In-Service Days Permits
PTW Dashboard HSE BBS cards JSA / SWI STAR Safety CAP
AI Safety Inventory PDA scanner Hazmat Pending Procurement
Vendors Maintenance Work Packages Downtime Document Ingest
AI Predictive Budget Reports Analytics Admin

Security and data

On your rig. One Windows host on the rig network; every office reaches it in a browser.

No internet. Nothing listens from outside, no telemetry, no automatic updates. AI runs on the host.

Named sign-in. Hashed PINs with lock-out, department scoping, full audit trail, sealed records.

Yours. The record leaves the rig only as the reports and backups you choose to send.

How a pilot works

DAY ONE

Install and train

A Windows machine, a label printer, a UPS. Your spreadsheets imported. On-site training per department. One-time setup fee.

MONTHS ONE AND TWO

Pilot, free

Real permits, cards and stores on one rig, with the founder on board to tune it to how your rig runs.

GO-LIVE

Licence per rig

Annual, per installation, under your own name and branding. The operator's window comes with it.

IF THE RIG STACKS

Licence pauses

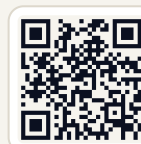

A rig off contract pays nothing until it restarts. The record stays on the host and in your backup.
